PSYC696B: Analyzing Neural Time-series Data

A Recurrent Neural Network (RNN) is a type of neural network well-suited to time series data. RNNs process a time series step-by-step, maintaining an internal state from time-step to time-step. For more details, read the text generation tutorial or the RNN guide. In this tutorial, you will use an RNN layer called Long Short Term Memory .

Analyzing Neural Time Series by Mike Cohen (2014) is a great book written for neuroscientists working with continuous neural data. Although it may seem like the book is mainly written for EEG analysis, I found that the topics in the book are easily translatable to any domain requiring continuous-data signal processing.

Abstract: Neural networks is one of the techniques used for time series analysis. The performance of neural networks is affected by some parameters such as neural network structure and the quality of data preprocessing. These parameters need to be explored in order to obtain an optimal neural network.

Recurrent neural networks - Practical Time Series Analysis

Time series forecasting is typically discussed where only a one-step prediction is required. What about when you need to predict multiple time steps into the future? Predicting multiple time steps into the future is called multi-step time series forecasting. There are four main strategies that you can use for multi-step forecasting. In this post, you will discover the four main strategies for ...

However, neural time series are complex and often high-dimensional, and there is a major bottleneck in statistical and computational methods for making sense of them. We aim to discuss statistical approaches for analyzing neural time series to increase our understanding of the neural code and computation.
