A study has ascertained that somatostatin-14, in combination with TPN, decreases the time of spontaneous closure of fistula and significantly reduced the necessary time for treatment with TPN (13.9 +/- 1.84 days somatostatine-14 + TPN versus 20.4 +/- 2.98 days only with TPN, for (p < 0.05), and a consequent reduction in morbidity rate (35% ...

Treatment of enterocutaneous fistula with total parenteral ...

Guidelines suggest that when tolerance to enteral nutrition is evident, parenteral nutrition should be weaned and discontinued when >60 percent of the patients' needs are met enterally, although there are no data to support this practice . Our practice is to wean parenteral nutrition proportionate to the amount of enteral nutrition being delivered, thus meeting but not exceeding the daily goals.

REFERENCES - UpToDate

If tolerated, further reductions can be made by reducing parenteral nutrition one night at a time over several weeks or months. Weaning can be facilitated by reducing/halving the parenteral nutrition given one night a week and seeing how well the child is the following day.
