In the 'uploadimage' function, copy and paste the below code to insert the file from the PC. Here, command uigetfile ('image extension type') is used for importing image in the MATLAB GUI. Read that file using command imread () and then display it with command imshow () on axes1 using axes (handles.axes1).

Getting Started with Image Processing using MATLAB

Digital image processing algorithms can be used to: Convert signals from an image sensor into digital images. Improve clarity, and remove noise and other artifacts. Extract the size, scale, or number of objects in a scene. Prepare images for display or printing. Compress images for communication across a network.

Digital Image Processing - MATLAB & Simulink

In image processing, noise in a digital image arises during image acquisition and also during transmission. Different types of noise include speckle, Gaussian, salt-and-pepper and more. The fun part is, we can use these types of noise as special effects in an image using MATLAB. Fig. 2: Special effects in an image using different types of noise
