Engine Performance Data Power

Generation Cummins Inc QSK38-G5

In many cases, power factor equal to 1.0 is used as a point to define nominal parameters published in the equipment data sheets. On the other hand, in some other catalogue data, performance is defined for a relatively low value of 0.8, which is a typical generator design

pressure inside the engine cylinder and provides a useful way of comparing relative engine performance. Cummins Power Systems Generator set datasheets and engine performance datasheets will always provide the BMEP value at rated load.

TRANSIENT PERFORMANCE OF

Acces PDF Engine Performance Data Power Generation Cummins Inc Qsk78

GENERATING SETS

A diesel engine's power at any RPM is controlled by how much fuel is metered into the injectors. This engine could produce 380 HP at 2,300 RPM, but since the propeller is only absorbing 250 HP, less fuel is being injected into the cylinders and less fuel means less power—even at the same RPMs.
