## **Handbook of Pain Assessment - CORE**

- Acute pain can be caused by a variety of conditions, such as trauma, burn, musculoskeletal injury, and neural injury, as well as pain from surgery/procedures in the perioperative period. A multimodal approach that includes medications, nerve blocks, physical therapy, and other modalities should be considered for acute pain conditions.

## **PAIN MANAGEMENT BEST PRACTICES - HHS.gov**

The second section focuses on measures of pain not dependent on self-report; the third section covers the assessment of special populations, including infants, children, and adolescents. The fourth section addresses assessment of specific pain conditions and syndromes; the fifth section covers special issues and applications.

2 Before using any of the pain assessment scales, talk with the child about the following:

- Find out what words the child uses for pain, e.g., ouch, hurt.
- Ask the child to give examples of pain (to identify the child's understanding and use of words)

## **pain assessment guidelines 2008 - McGill University**

"This is the authoritative reference on pain assessment, and has been since the first edition. The Handbook integrates the rapidly growing body of assessment research into a single manageable volume. It reminds us that identifying and measuring meaningful behavioral outcomes--assessing the patient and not just the pain--is the key to the process.
