This compound contains lithium and oxygen. But lithium is from group 1 and hence have a +1 charge while oxygen is from group 16 and have a 2- charge. This has to be balanced, so you will need 2 atoms of lithium. This will balance 2- charge of oxygen and the formula of this compound is Li_2O . How to write formulas

Compound interest, or 'interest on interest', is calculated with the compound interest formula. The formula for compound interest is $P (1 + r/n)^{(nt)}$, where P is the initial principal balance, r is the interest rate, n is the number of times interest is compounded per time period and t is the number of time
