Lesson 11.4 Corresponding Parts of Similar Triangles (continued) If a triangle is isosceles, the bisector of the vertex angle divides the opposite sides into equal parts. (That is, the angle bisector is also a median.) However, as the triangle on the right below shows, this is not true for all triangles. c-95 AX is an angle bisector.

11.3: Same Perimeter. There are many possible rectangles whose perimeter is 50 units. Complete the table with lengths, , and widths, , of at least 10 such rectangles. The graph shows one rectangle whose perimeter is 50 units, and has its lower left vertex at the origin and two sides on the axes. On the same graph, draw more rectangles with perimeter 50 units using the values from your table.

LESSON Solve $x^2 = 5$. $x^2 = 5 \times 2$ $2 \times 2 = 5 \times 2$ $2 \times 2 = 5 \times 2$ 2×3 Check: $x^2 = 5 \times 2$? Square both 5 5 5 If two square root expressions are on the same side, move one of the expressions to the other side before squaring both sides. Solve each equation. Check your answer. $7 \cdot x \cdot 8 \cdot 6 \cdot 8$. $x \cdot 3 \cdot 10 \cdot 9$. $3x \cdot 4 \cdot x \cdot x \cdot 2 \cdot 2 \cdot 8 \cdot 6 \cdot 2 \cdot x \cdot 2 \cdot 3 \cdot 2$

LESSON Reteach 11-9 Solving Radical Equations

An additional advantage to this form of the equation is that every line, including horizontal and vertical lines, can be written in this form: $y = 5$ is an equation for a horizontal line while $x = 3$ is an equation for a vertical line.
