CSE 30331/CSE 34331 is about the data structures and algorithms that are the core of computer science and the building blocks for nearly every computer program you will write. In this course, you will explore the fundamental techniques in the design and analysis of non-numerical algorithms and their data structures.

Data Structures

This chapter explains the basic terms related to data structure. Data type is a way to classify various types of data such as integer, string, etc. which determines the values that can be used with the corresponding type of data, the type of operations that can be performed on the corresponding type ...

Step 4: Select Appropriate Data Structures. and Proceed to Design and Implement the Data Type With a good abstract understanding of the data type, we can select an appropriate data structure, such as a fixed-sized array, a dynamic array, a linked list of nodes, or a binary tree of nodes.

Main/Savitch CS2 C++ Preface

The anatomy of the brain is complex due its intricate structure and function. This amazing organ acts as a control center by receiving, interpreting, and directing sensory information throughout the body. The brain and spinal cord are the two main structures of the central nervous system.There are three major divisions of the brain.
