PVC Rocket Engine is an excellent manual that guides the beginner, step by step, through construction and testing of the single use, homemade engine. At every step, safety is stressed. The book is complete in that it covers mechanical construction, fuel mixing/loading, igniter construction/placement, protection for long term storage, and testing.

Amazon.com: Customer reviews: PVC Rocket Engine: A do-it ...

For perspective, below is a photo of a small, re-loadable PVC motor I have fired 4 times with an uninhibited grain of about 40 grams of rcandy. This is moderately large by my standards, having made mostly fireworks-type rockets burning 8 to 10 grams of this fuel. This small engine is part of a unit I am working on for developing an ejection system.

500 gram KN/Sucrose engine - Recrystallized Rocketry

This is a quick tutorial on how to make a homade rocket from a pvc pipe and some foam. This rocket can be built in about 45 minutes and goes quite high. It uses hairspray as fuel and like to use...
