Michele M. Burlew | SAS Support

SAS has a powerful programming feature called Macros which allows us to avoid repetitive sections of code and to use them again and again when needed. It also helps create dynamic variables within the code that can take different values for different run instances of the same code.

SAS - Macros - Tutorialspoint

code, there is an extra step. Before SAS can compile and execute your program, SAS must pass your macro statements to the macro processor which then “resolves” your macros generating standard SAS code. Because you are writing a program that writes a program, this is sometimes called meta-programming. MACROS VS. MACRO VARIABLES

SAS Macro Programming Made Easy, Second Edition Reviews ...

I shouldn't need a pre-compiler for simple logical constructs that every other modern programming language supports! Don't get me wrong - I know macro well, and use it all the time. But I'd rather `***program***` in Python, C#, Java, etc, that support modern code constructs. If the SAS language was object oriented, even better.
