problems and innovative solutions, design and construction practice in regions with regular and extreme soil conditions.

Soil Mechanics and Foundation Engineering | Home Foundation

engineering is the application of rock and soil mechanics. Soil mechanics describe the behavior of the

soil, and rock mechanics describe the behavior of different types of rocks. Most individuals pursue a degree in geotechnical engineering. Under this degree, students learn about the three branches.

As the name Soil
Mechanics implies the
subject is concerned
with the deformation
and strength of bodies
of soil. It deals with the
mechanical properties
of the soil materials
and with the
application of the

knowledge of these properties to engineering problems. In particular it is concerned with the interaction of structures with their foundation material. This includes both conventional structures and also structures such as earth dams, embankments and roads which are themselves made of soil.
