The last equation is  $0x+0y=36$ , which has no solution. 14. b. False. The system  $x+y=0$ ,  $x-y=0$  is consistent, but  $x=0=y$  is the only solution. d. True. If the original system was consistent the final system would also be consistent because each row operation produces a system with the same set of solutions(by Theorem 1.1.1). 16. The ...

So the original system has a solution if and only if  $k + 2g + h = 0$ . 26. A basic principle of this section is that row operations do not affect the solution set of a linear system. Begin with a simple augmented matrix for which the solution is obviously  $(-2, 1, 0)$ , and then perform any elementary row operations to produce other augmented ...
