### Solution Of An Inequality Definition

Inequality solution is any value of the variable that makes the inequality true. Solving linear inequalities is almost exactly like solving linear equations. A solution to an inequality makes that inequality true. In this lesson, we learn to test if a certain value of a variable makes an inequality true.

### Introduction to Identifying Solutions to an Inequality ...

An inequality compares two values, showing if one is less than, greater than, or simply not equal to another value.  $a \neq b$  says that a is not equal to b  $a < b$  says that a is less than b  $a > b$  says that a is greater than b (those two are known as strict inequality)  $a \leq b$  means that a is less than or equal to b

### Inequality Definition (Illustrated Mathematics Dictionary)

In mathematics, an inequality is a relation which makes a non-equal comparison between two numbers or other mathematical expressions. It is used most often to compare two numbers on the number line by their size. There are several different notations used to represent different kinds of inequalities: The notation  $a < b$  means that a is less than b. The notation  $a > b$  means that a is greater than b. In either case, a is not equal to b. These relations are known as strict inequalities, meaning that

### Inequality (mathematics) - Wikipedia

A solution set is the set of values which satisfy a given inequality. It means, each and every value in the solution set will satisfy the inequality and no other value will satisfy the inequality. Example: Solve  $2x + 3 \leq 7$ , where x is a natural number. Solution:  $2x + 3 \leq 7$ . Subtracting 3 from both the sides,  $2x \leq 4$ . Dividing both sides by 2,  $x \leq 2$

The solution to structural inequality must address the structure that created it. For example, it's not enough to help an individual to move from one town to another. The zoning that created both communities must be changed. Both towns must be zoned for large land lots and apartment complexes as well as green spaces and halfway houses.

### Structural Inequality: Facts, Types, Effect, Solution

The solution set is written as  $\{ x | x < -9 \text{ or } x > -5 \}$  The graph of this solution set is shown in Figure 2. Figure 2. x is less than -9 or is greater than -5. Example 3. Solve for x:  $-12 \leq 2x + 6 \leq 8$ . Since this compound inequality has no connecting word written, it is understood to be "and."

A system of inequalities is a set of two or more inequalities in one or more variables. Systems of inequalities are used when a problem requires a range of solutions, and there is more than one constraint on those solutions. Leon is the manager of a textile factory. His workers have a total of 400 man-hours this week for him to allocate.
