History of science - History of science - The rise of modern science: Even as Dante was writing his great work, deep forces were threatening the unitary cosmos he celebrated. The pace of technological innovation began to quicken. Particularly in Italy, the political demands of the time gave new importance to technology, and a new profession emerged, that of civil and military engineer.

The founding of modern biology. The study of living matter lagged far behind physics and chemistry, largely because organisms are so much more complex than inanimate bodies or forces. Harvey had shown that living matter could be studied experimentally, but his achievement stood alone for two centuries. For the time being, most students of living nature had to be content to classify living forms as best they could and to attempt to isolate and study aspects of living systems.

The history of science and technology is a field of history that examines how the understanding of the natural world and the ability to manipulate it have changed over the millennia and centuries. This academic discipline also studies the cultural, economic, and political impacts of scientific innovation. Histories of science were originally written by practicing and retired scientists, starting primarily with William Whewell, as a way to communicate the virtues of science to the public. In the

Butterfield also recognizes the role of religion in the beginnings of science. He explains... "One thing is clear: not only was there in some of the intellectual leaders a great aspiration to demonstrate that the universe ran like a piece of clockwork, but this was itself initially a religious aspiration." (131)

Hellenic science was built upon the foundations laid by Thales and Pythagoras. It reached its zenith in the works of Aristotle and Archimedes. Aristotle represents the first tradition, that of qualitative forms and teleology. He was himself a biologist whose observations of marine organisms were unsurpassed until the 19th century.
